InfWork::OldWorkTask *WorkTask*

InfWork::Capability *WorkIdentifiedObject*
- + performanceFactor: String [0..1]
- + status: Status [0..1]
- + type: String [0..1]
- + validityInterval: DateTimeInterval [0..1]

In the diagram we show fully expanded:
- Skill and Craft from this package
- QualificationRequirement and Capability from other packages

- Skill and Capability look very similar. What is the difference?
(Greg) I get confused over this too. This was put in its present form during the Vancouver meeting under the direction of Part 6 Team (Chris Macqueen, Ian Wells, et al.) We should set up a conference call with the Part 6 Team at some point to work through all part 6 related matters.

- QualificationRequirement, according to its doc, seems to mean the same as Skill.

How could we simplify this mess?
